

WasteRoutes

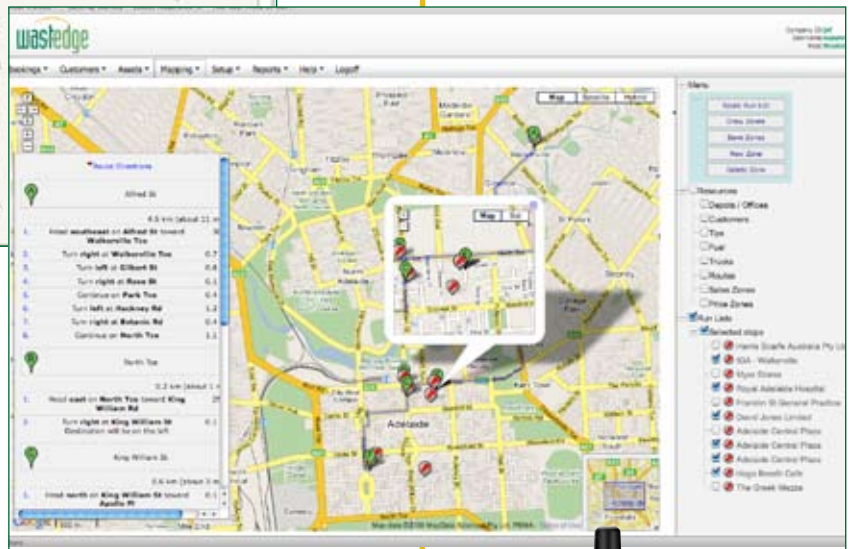

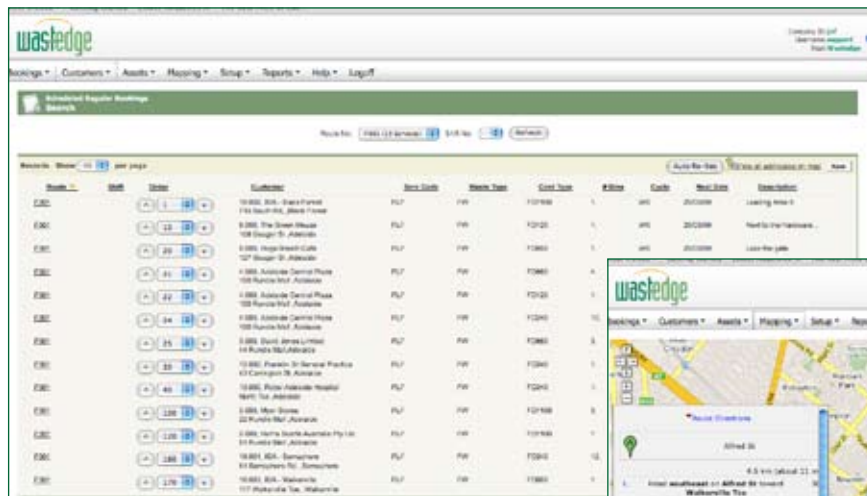

Regular Collections Management

Regular Collections

For Commercial / Industrial Waste or Resource Recovery Operations

Regular lift operations need support for day-of-service routes that help you schedule pickups for a typical day of the week for a nominated route type, with default truck and driver. These can apply to operations like Frontlift, Rearlift, Hooklift, Medical, Paper/Recyclables or Liquid waste. Account customer services on those runs could have a range of service lines, bin types and waste types with multiple bins per location (site), such as (FEL 1.5, 3.0, 4.5 or REL 240 Card, Glass, Paper).

Some customers need odd regular cycles such as 2, 3 or 4 weekly schedules on nominated days of the week. Others may be on a ring-in or unpredictable call basis.

See scheduled routes on the map and optimise run schedules. Wastedge helps you generate regular jobs, add ring-ins and then print run-lists or dispatch pickup lists direct to a driver's mobile.

Wastedge's regular route management business process support functionality helps:

- Streamline the scheduling of regular services with minimal admin effort,
- Easily schedule odd collection cycles and pick-up frequencies (e.g. each 3rd Friday)
- Ease and speed up logging if ring-in requests (even let your customers log their own requests)
- Generate daily collection run-lists for print or download (or upload from your in-house system)
- Link directly to driver mobiles for download worklists on log-in
- Instant dispatch of late ring-ins where driver has not yet passed that service point
- Makes confirming run sheets easy either by direct driver confirmation or adjustment by exception for only those jobs that changed due to blocked access or partial pickups.
- Consolidate collection charges and rental fees into one invoice weekly or monthly and then pass summary invoice details into your MYOB or Quickbooks with seamless integration.

Wastedge.com's WasteRouteScheduler helps you streamline route schedules and minimise admin efforts!
