

WasteSkipScheduler

Web based self-service casual waste bin-hire job management facility

- Linked with WasteScheduler & WasteDispatch to mobile PDA-phones
- Also links with WasteGIS & GPS for integrated mapping displays

Web Job Booking, Job-List Scheduling and Dispatch to mobile on truck PDA-phone devices

Small skip companies and owner operators would use these interconnected modules to enter, upload and review job bookings, scheduled and allocate these against drivers and dispatch jobs out to mobile phone-PDA devices in the truck.

This software is hosted off-premise through secure internet and GPRS network connections so there is no need to install any software to get started. After subscribing nominated users to the secure internet service, companies can start managing their work-lists immediately

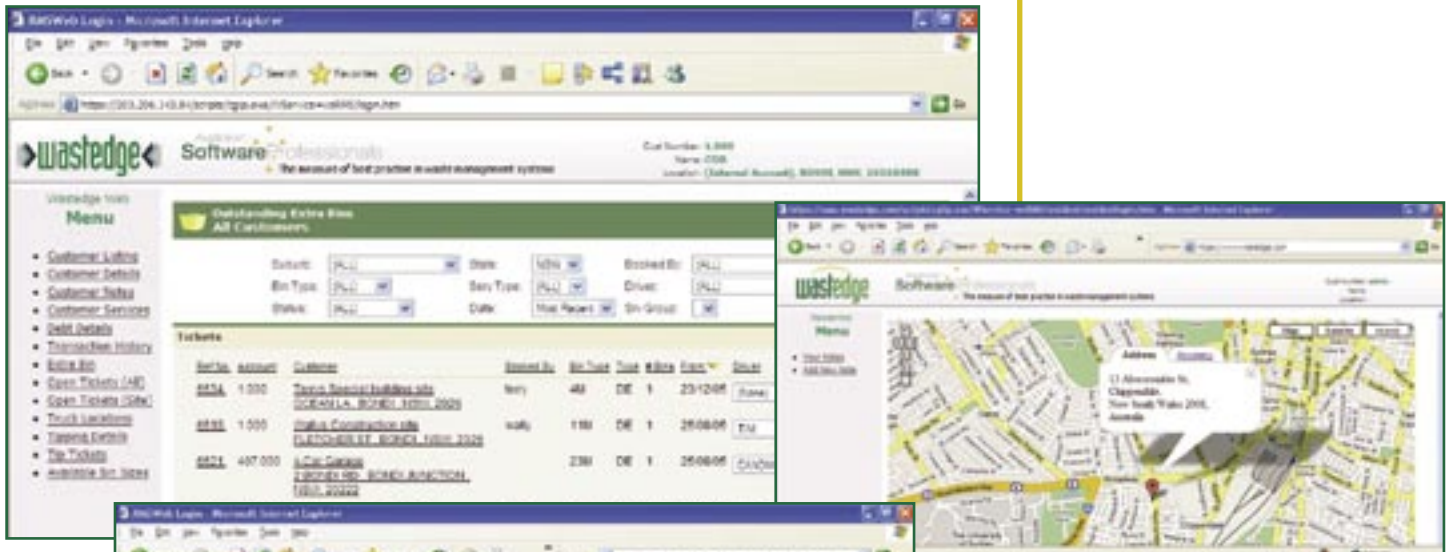

Jobs can be set it to auto allocate based on suburb/area-zone. Jobs can also be uploaded from existing in-house systems for scheduling, then dispatched to mobile units according to who's nearest or next available (if used in conjunction with WasteGIS/GPS mapping facilities). Job dockets, COD Invoices or work lists can be printed if the dispatch to mobile option is not required. The location of any specific job can also be shown on Google Maps for any country or region covered by Google's internet based mapping services.

Business Benefits:

- Easy to sort/filter lists
- Streamlines Allocation process
- Helps Balance workloads
- Reduces Paperwork handling
- Remembers future jobs
- Reduces bin loss

Performance Measures

- Captures Job Data KPIs
- Records Inout/dispatch times
- Counts Work per allocator
- Counts Quotations (pipeline)
- Measure service response
