

WasteMapGIS

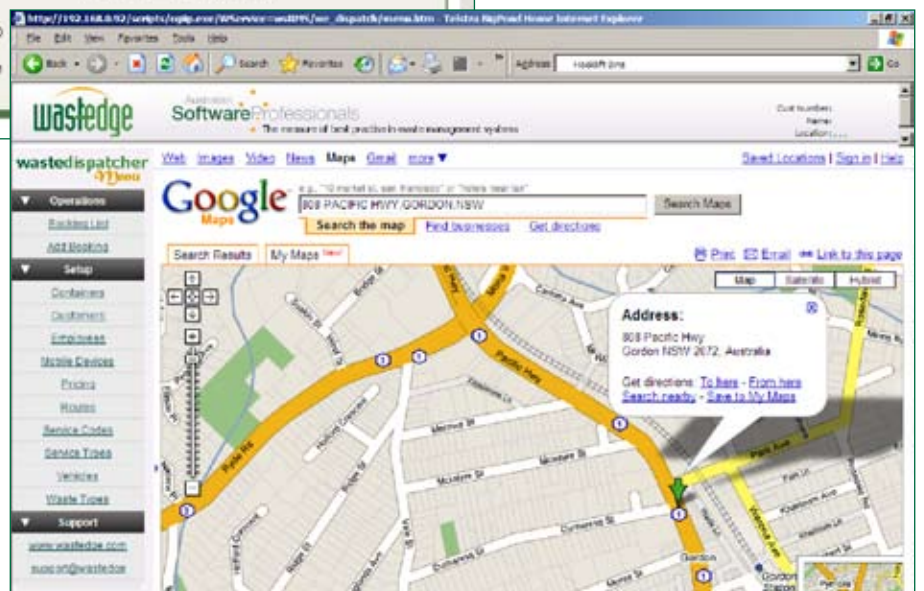

This Wastedge GIS (Geographical Information System) mapping module allows you to show where new customer addresses are or where jobs are with the help of Google Maps.

This allows multiple customer locations or job addresses to be shown on the map based simply on lookup/validation of street addresses against the street-number/road/suburbs in Google Maps.

Simply seeing the picture of where a new location is on the map, can help you determine which driver to assign work to, or to see how close the location may be to which nearest disposal site.

Features / Functionality Supported

- Customer location displays
- Multiple or single job location displays
- Ability to register disposal site locations
- Ability to show pop-up site details

Customer Address
Bin Types on Site
Service Directions
Job instructions

This module doesn't need any GPS device on trucks to show locations.

Business Benefits:

- Helps validate addresses
- Helps visualise distances
- Shows spread of business
- Supports work allocation

Performance Measures

- Determine distance from base
- Determine nearest tips distance
